

DESIGN

Design Research

This document serves as a detailed guide outlining the design process of our website. Each section provides insights into the decision-making behind our design choices. We have included a thorough record of the websites we researched for inspiration, demonstrating how we incorporated elements from each source into our own design.

Our design process was influenced by several exemplary organisations. **Red Cross Australia** inspired our aesthetic choices and User Interfaces design. **SA Volunteer** provided us insights into structuring our website, ensuring seamless navigation and organisation of content. And **YouX** taught us valuable strategies for presenting information clearly and engagingly, enhancing the user experience.

Overview

Each page of the website will feature a header and footer. The header will include a logo to return to the main homepage, a search bar to quickly search relevant information, a login button to log in/sign up, as well as "Events" and "Branches" buttons to navigate to relevant lists. Upon logging in, the login button transforms into an avatar for users, a bell icon for announcements, and a dropdown menu for access to personalised activities. For all roles, the menu includes a "My Account" link to update personal information and a logout option. Managers gain access to additional features like "My Branch" for branch management and "My Dashboard" for internal management tasks. System administrators have further controls, including "Manage Systems" for user and system administration. In the footer, users will find supplementary information such as quick navigation links, locations, and contact details.

Primary colour

#E42313  with #FFFFFF (white) background.

Drawing inspiration from [Australian Red Cross](#), we opted for the primary colour #E42313 (red), complemented by a white background. By limiting the number of colours of the website to only 2 colours, we focus on drawing users' attention to important information and images on the webpage.

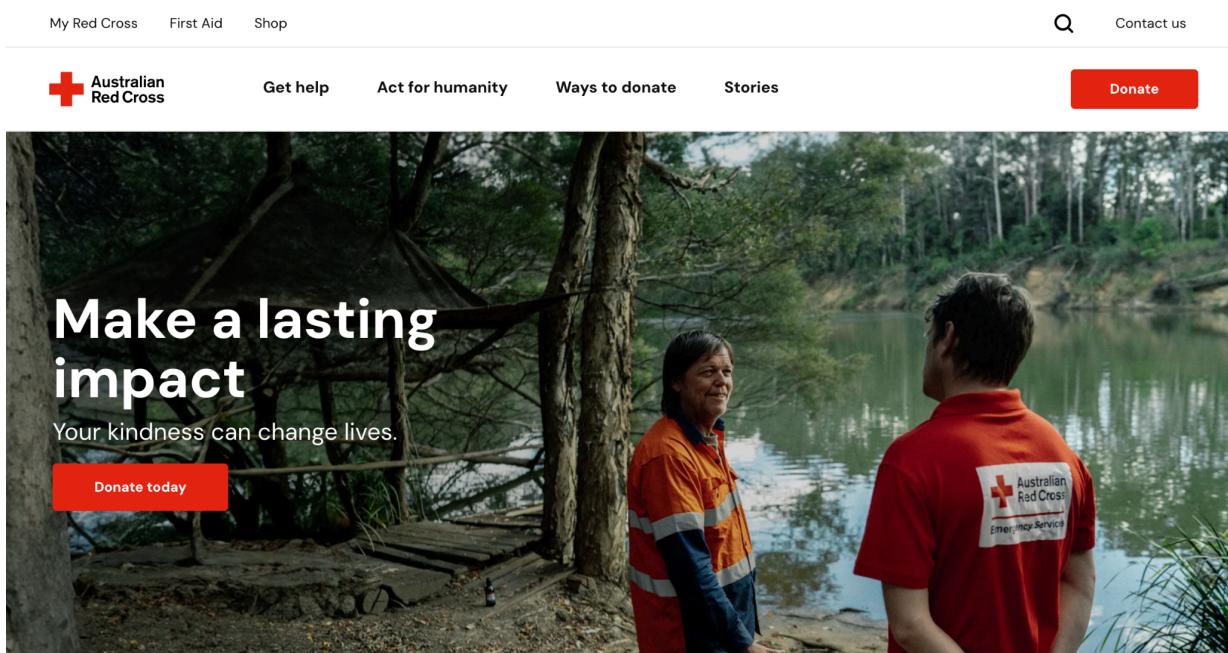

Figure 1: Australian Red Cross home page showcasing how well the #E42313 colour blends with the white background and colourful images.

Header:

Figure 2: Australian Red Cross's website header.

Figure 3: Our header inspired by the Australian Red Cross website.

For the header, we took inspiration from Red Cross Australia by grouping the main content on one side, reserving space for the search bar and login button. This layout ensures a balanced and organised appearance, facilitating easy access to essential features while maintaining a clean and intuitive design.

Footer

Inspired by [YouX](#), we made the footer background black, creating a striking contrast with the white backdrop. This effectively highlights the logo of social media platforms, contact

information, and quick navigation links, enhancing visibility and ensuring a sleek and modern aesthetic.

Figure 4: YouX footer.

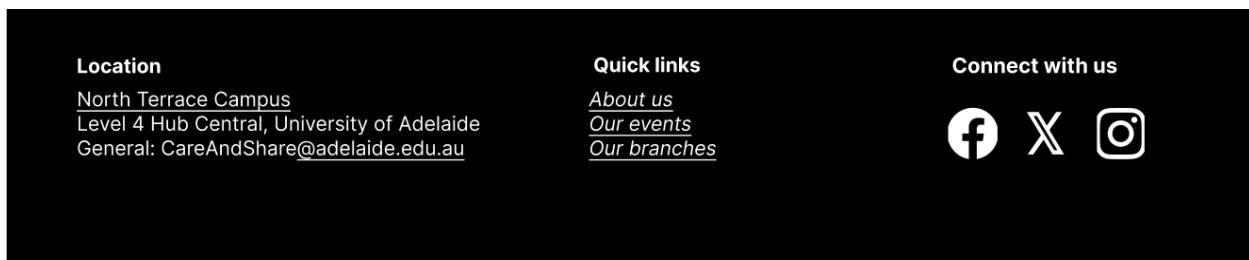

Figure 5: Our footer inspired by YouX

The footer section of our website serves as a navigation aid, contact point, and also a place for additional information. It allows users to navigate to different sections of the website and other websites conveniently.

This section provides links to important pages within the website (e.g., Home, About Us), and also to our social media accounts (e.g., Facebook, Twitter, Instagram). Contact details such as address, phone number, and email address are also included in the footer to ensure easy contact in case users of the website have any inquiries.

A copyright notice with the current year is also displayed to indicate our ownership of the website's content, which helps us protect our intellectual property rights.

Logo

As our website's name is "CareAndShare", our logo embodies simplicity with a clean design, reflecting the essence of community engagement, inviting everyone to join volunteer organisations.

Figure 6: Our logo

Homepage

[SA Volunteer](#)

The design of our homepage draws inspiration from Southern Volunteering (SA) website, since its homepage has a clutter-free and systematic arrangement of content. We embraced a similar structure to ensure information is accessible and well-organised.

Influenced by Southern Volunteering's homepage, we separated the website into sections, each caters to a group of target audience needs. The SV website categorises their primary users into 2 groups: people who want to volunteer and organisations that need volunteers. This distinction streamlines the user experience by allowing users to quickly identify information relevant to their needs. We also included strong imagery to evoke a sense of community and teamwork, mirroring SV's approach to highlight volunteerism.

Unlike Southern Volunteering (SA) homepage, where the logo is positioned centrally below the navigation bar, we strategically placed our logo within the navigation header itself. This way, our logo can double as the 'Home' button, offering both brand visibility and functional ease. We have transformed the space beneath the header into a main feature poster, followed by the 'About Us' section. This design provides visitors with instant insight into our mission and services. This clear introduction acquaints users with CareAndShare purpose, providing an engaging summary of what we stand for. Placing the login option in the top right corner of the homepage follows a common convention seen in most websites, thereby reducing the cognitive load on the user.

Figure 7: The Southern Volunteering (SV)'s homepage

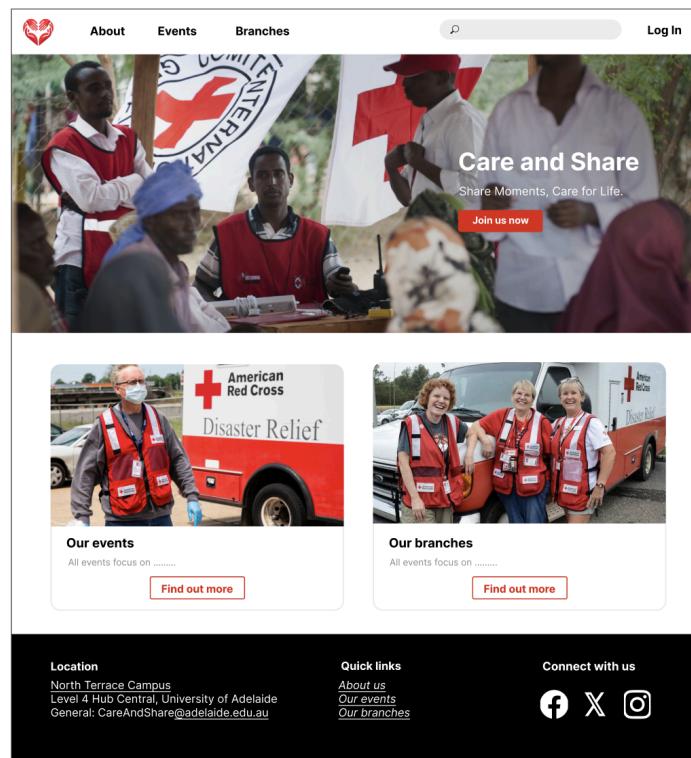

Figure 8. Our homepage

Sign up/ Log in

Cocokind

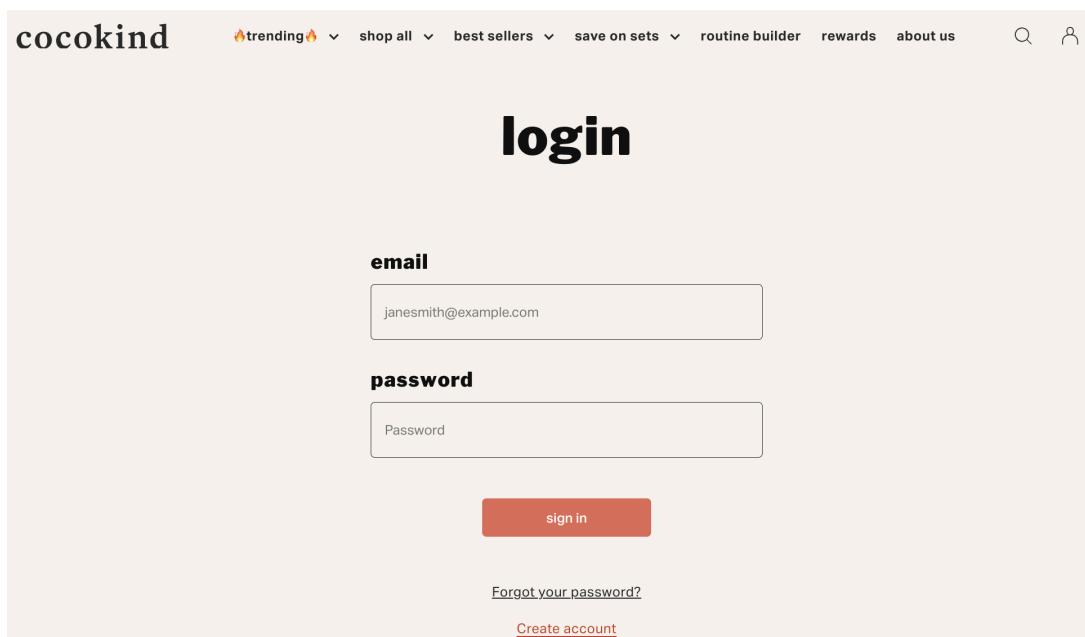

Figure 9. The cocokind login

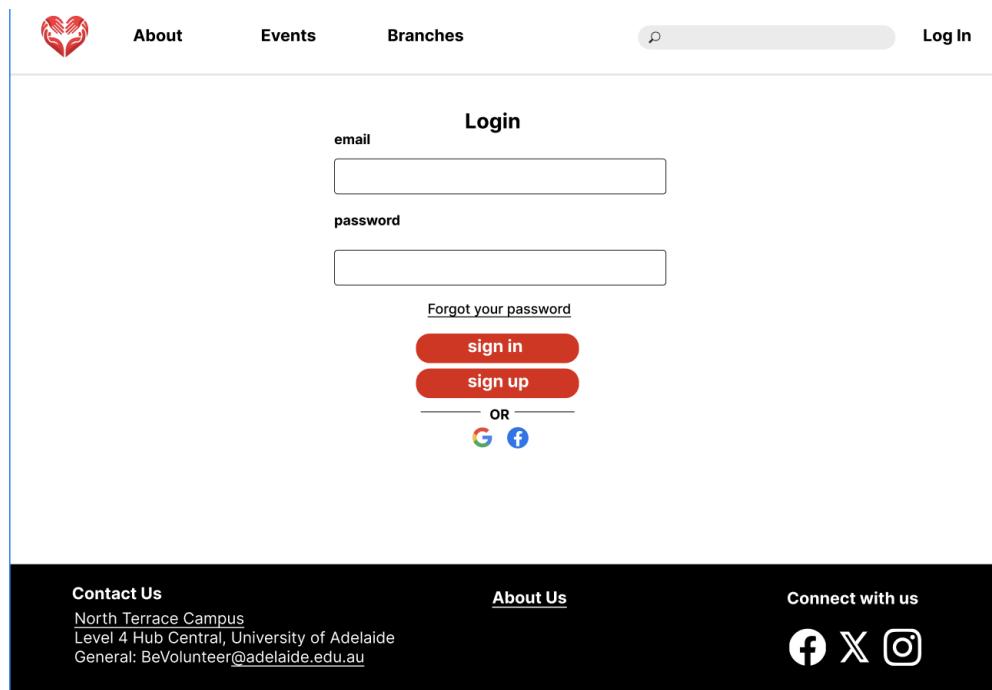

Figure 10. Our login

Design

Our website uses a list format to display events. Since a list format is linear and sequential, it is suitable for displaying events. Each event entry includes essential details such as a picture, the name, date, and location of the event, and a brief summary of the event. The list design is carefully crafted to minimise both kinematic load and cognitive load on our users. It provides a clear and structured way of displaying events, with the latest events updated on top of the list. By vertically scrolling down the web page, users can easily scan all of the events, which are ordered chronologically.

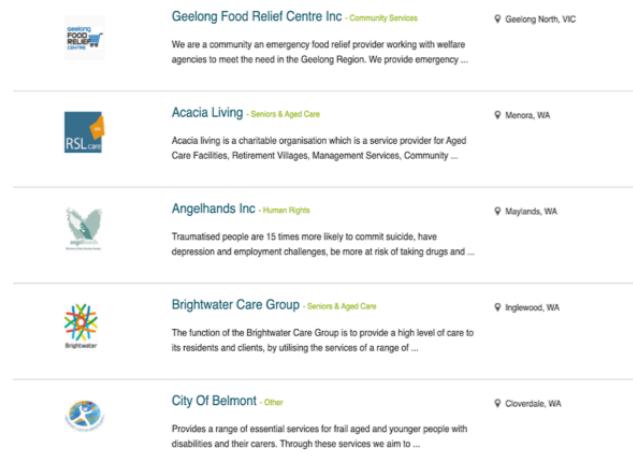

Figure 11. GoVolunteer's list format display of Organizations

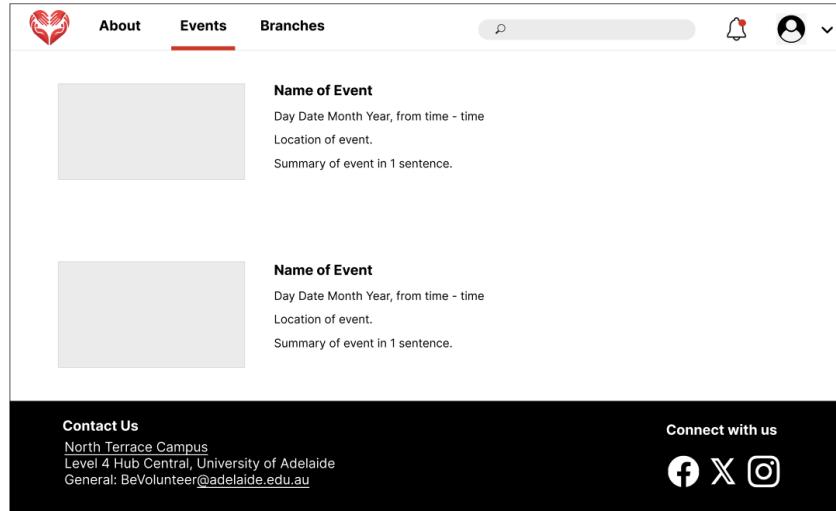

Figure 12. CareAndShare's list format display of Events

Branches

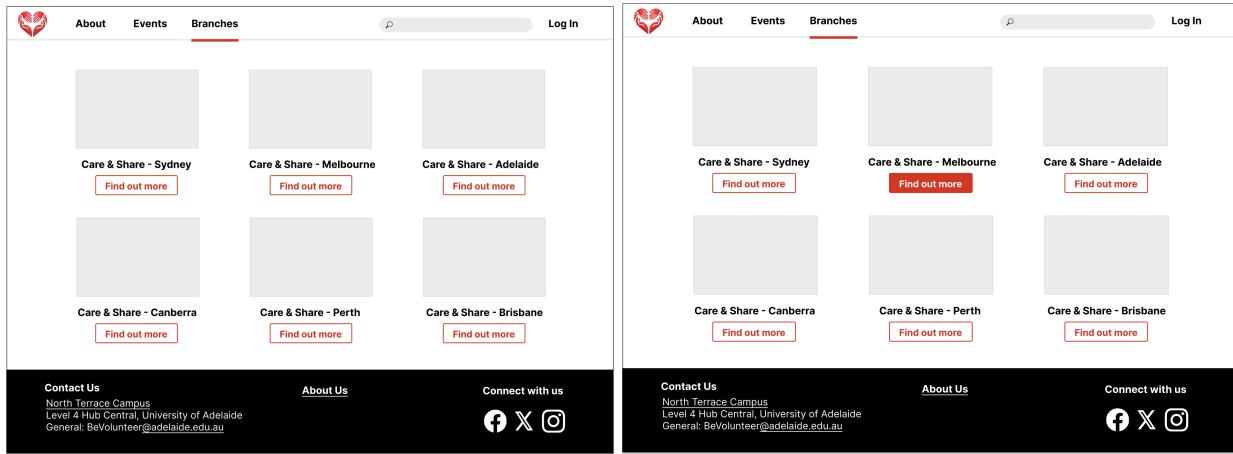

Figure 13. CareAndShare displays branches using a grid format.

Our website employs a grid format to showcase branches, drawing inspiration from the intuitive club listings layout used by the YouX website. This design choice is aimed at enhancing user experience by minimising kinetic and cognitive load. First of all, the grid layout presents branches side by side, allowing users to efficiently scan different options with minimal physical effort. Users can quickly locate specific branches without the need for extensive scrolling or navigation. Secondly, the visual appeal of the grid design facilitates easier comparison of branches based on key attributes such as location, category, and logo. Users can mentally process information more efficiently when presented in a structured grid format.

About Event

Taking inspiration from the Club Index on YouX, we have developed an about event page that offers in-depth information about each event. This page provides users with comprehensive details including event time, location, host branch, and ticket pricing. Our goal in creating these detailed event pages is to equip users with the essential information needed to make informed decisions about RSVPing for events.

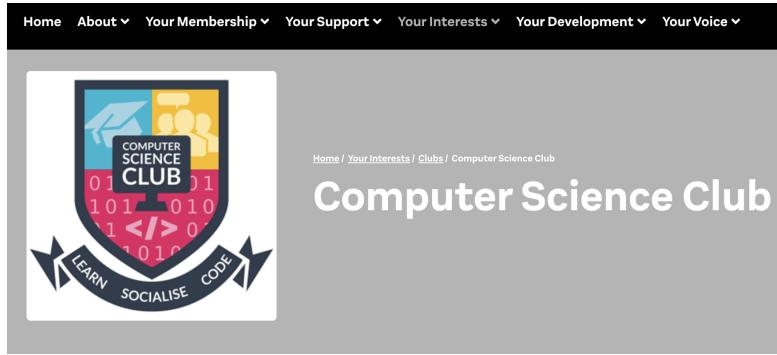

Figure 14. YouX index page.

North Terrace Campus Level 4 Hub Central, University of Adelaide General: CareAndShare@adelaide.edu.au	About us Our events Our branches	

Figure 15. Displaying event information with an RSVP button

About Branch

Similar to the About Event page, we have developed an About Branch page that provides details of each branch. Users can navigate to this page through the Branches grid website. This page provides users with information on Branch location, contact details, membership fee, and description. Our goal in creating this detailed page is to help users with the decisions of joining to become a member of an organisation.

My Account

We have developed a customised "My Account" dashboard for each user role, allowing easy management of personal information. Regardless of role, users can view or edit their name, location, mobile number, and email address. Additionally, organisation members can see and opt to leave the organisations they're part of, and update email notification preferences. For added security, users must confirm their current password to change it, ensuring password changes are authorised by the account owner.

The screenshot shows a web-based password change interface. At the top, there's a navigation bar with a heart logo, 'About', 'Events', and 'Branches' links, a search bar, and a user profile icon. Below the navigation is a title 'change password'. The main area contains three input fields: 'enter old password', 'enter new password', and 're-enter new password'. Underneath these fields is a link 'Forgot your password?'. A red 'submit' button is positioned below the password fields. At the bottom of the page, there's a dark footer bar with 'Contact Us', 'About Us', and 'Connect with us' sections, along with social media icons for Facebook, Twitter, and Instagram.

Figure 16. Change Password

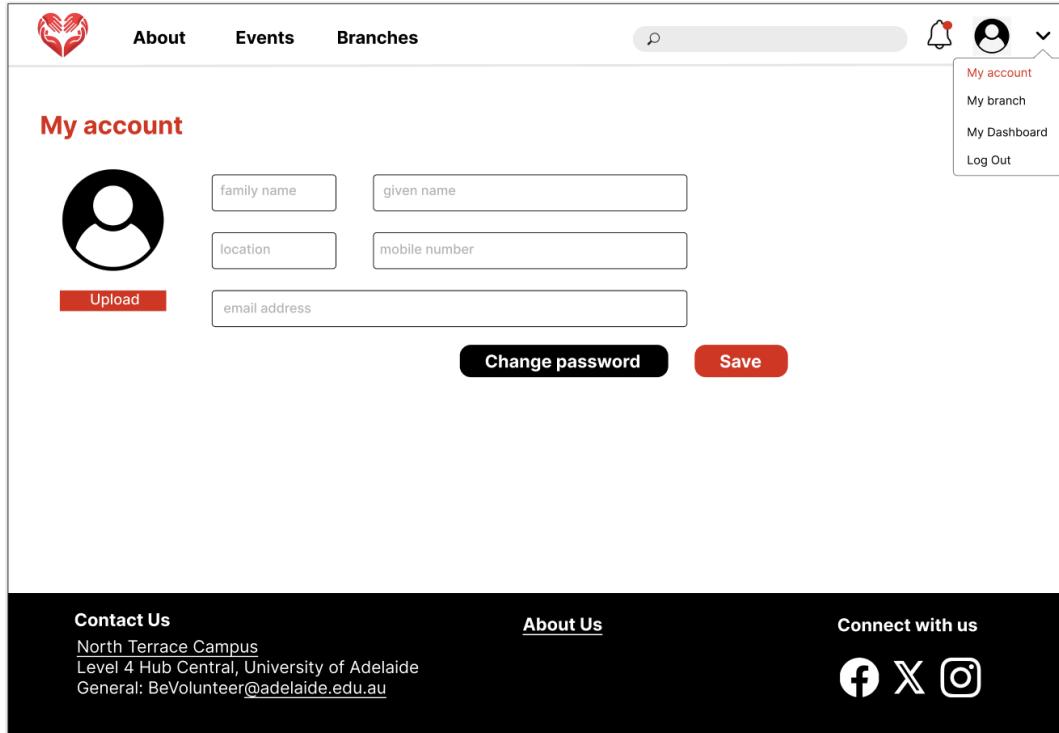

Figure 17. My Account

Extra Features

Search Bar: [Australian Red Cross](#)

A search bar has been added to help users' search process become more convenient. For a website with a large amount of content, a search bar will significantly improve navigation efficiency. Users can easily locate what they are looking for without having to browse through multiple pages manually, helping them to save time and effort.

Figure 18. Search bar for better navigation efficiency

For the search results, we have decided to choose the *list-view* layout with the inspiration taken from the [Red Cross](#). With multiple search results, a *list-view* layout helps to maximise the use of available screen space. It particularly benefits those accessing our website on small-screen devices like mobile phones.

Volunteer with Red Cross

Volunteer

Join Red Cross and be part of the largest humanitarian movement in the world. Get involved in our formal volunteer programs and support your local community.

Figure 19. Search results from the Australian Red Cross website.

The screenshot shows a search results page for the Australian Red Cross website. At the top, there is a navigation bar with links for 'About', 'Events', 'Branches', a search icon, and 'Log In'. Below the navigation bar, the title 'Search Results' is displayed, followed by the text 'Found a number of searches for 'keyword''. There are two search results listed, each consisting of a placeholder image, the text 'Article Name', and the placeholder text 'Article content is displayed here...'. At the bottom of the page, there is a footer section with 'Location' information (North Terrace Campus, Level 4 Hub Central, University of Adelaide, General: CareAndShare@adelaide.edu.au), 'Quick links' (About us, Our events, Our branches), and 'Connect with us' social media icons for Facebook, Twitter, and Instagram.

Figure 20. Displaying our search results with a list-view layout

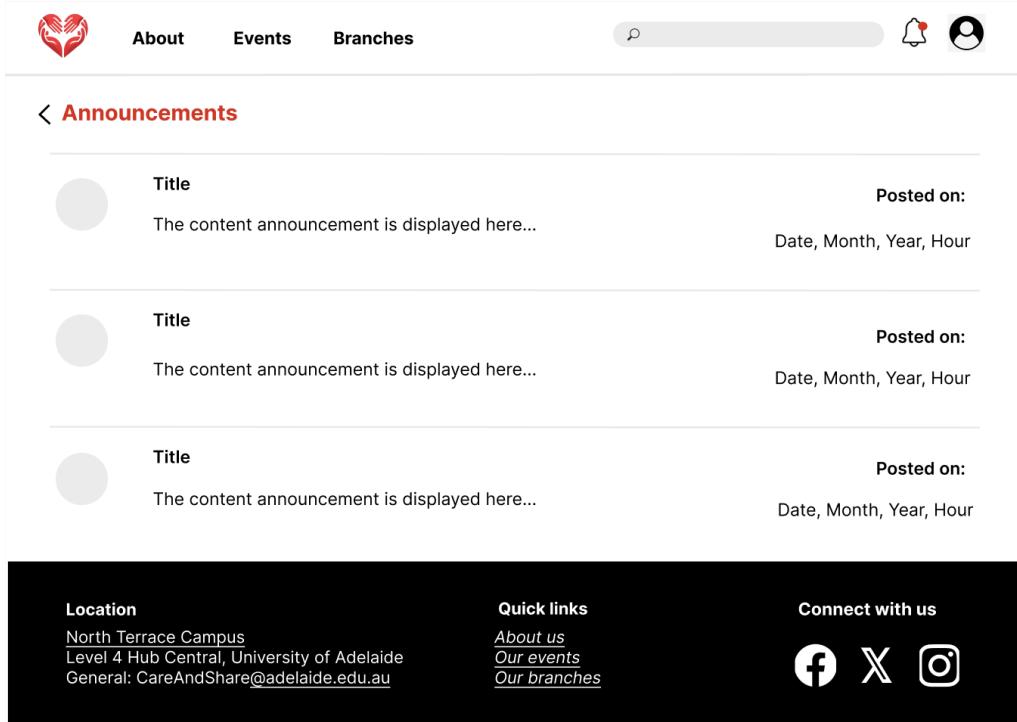

Announcements

MyUni

To keep our users updated with all events from our organisations, we have added the *Announcements* section which was inspired by MyUni's *Announcements* section:

Figure 22. Care And Share Announcements page

All announcements will be displayed chronologically along with their titles and posted dates to make it easier for users to follow, thus enhancing user experience.

Clicking on the announcement's title will navigate users to another page that shows all the announcement's details:

A screenshot of a mobile application interface titled "MyUni". At the top, there is a circular profile icon with the letters "MG", followed by the name "Manish Gupta", the title "AUTHOR | TEACHER", and the date "11 Apr 20:33". On the right side of the header are three small icons: a bookmark, a share symbol, and a more options menu.

An announcement regarding registration of project groups.

Dear Students,

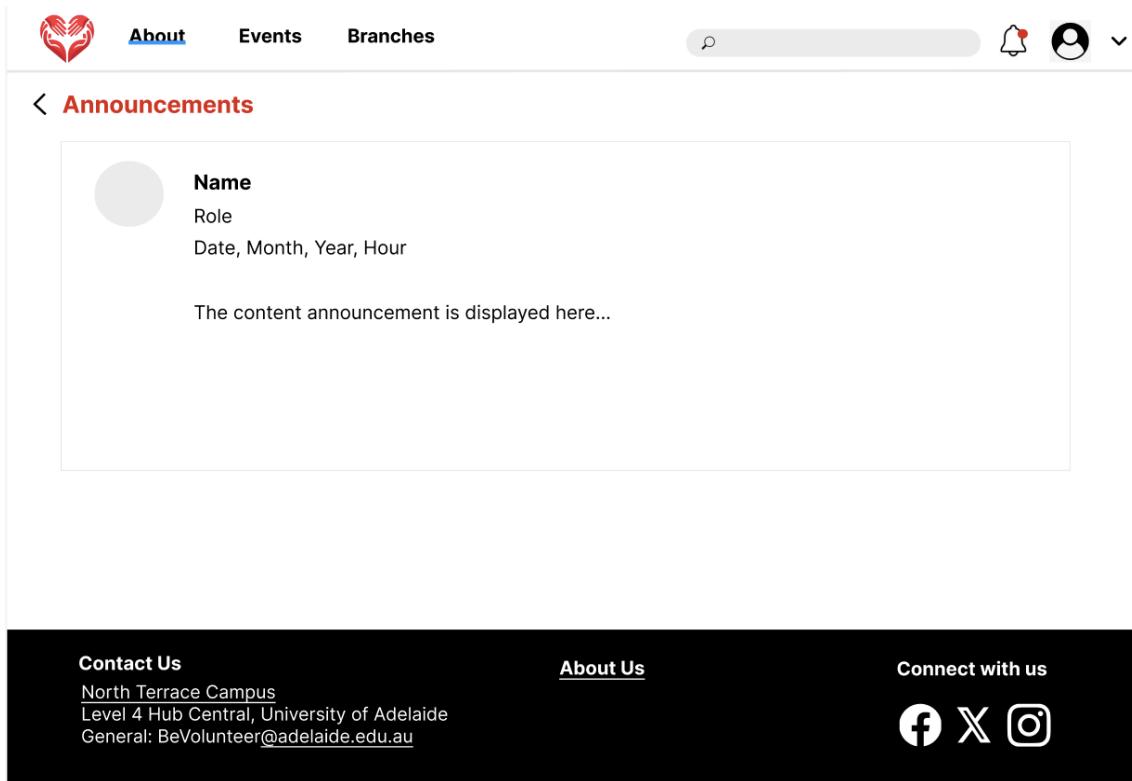

I hope you are all doing well. This announcement pertains to the registration of project groups. We have randomly assigned unregistered students into groups with other students so that group formalities can be completed. Please double-check that undergraduate (UG) students are registered with other UG students, and (PG) students are registered with other PG students.

Thank you.

With Regards

Dr. Manish Gupta

Figure 23. MyUni Announcement details

A screenshot of a web-based application interface titled "Care And Share". At the top, there is a navigation bar with icons for a heart, "About", "Events", and "Branches", followed by a search bar and user profile icons for notifications and account management.

The main content area has a heading "**< Announcements**". Below it, there is a form field labeled "Name" with a placeholder "Role" and "Date, Month, Year, Hour". A message placeholder says "The content announcement is displayed here...".

At the bottom of the page, there is a footer section with "Contact Us" information: "North Terrace Campus", "Level 4 Hub Central, University of Adelaide", and "General: BeVolunteer@adelaide.edu.au". There are also links for "About Us" and "Connect with us" (Facebook, X, Instagram).

Figure 23. Care And Share Announcements details

Dashboard:

MyUni

After signing up / logging in, organisation managers and system admins will have different dashboards corresponding to their roles. Each will be displayed in a user-friendly grid-view layout which was inspired by MyUni's Dashboard.

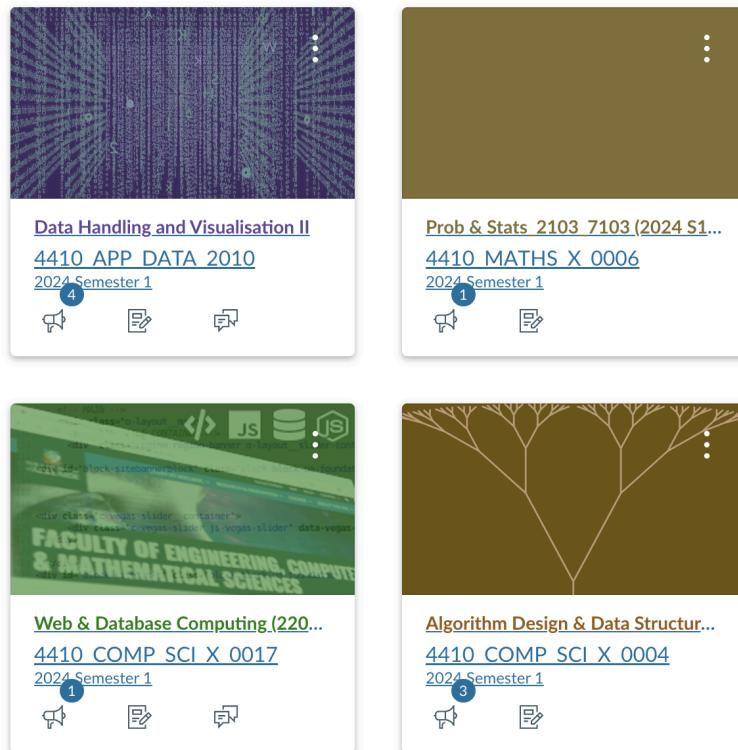

Figure 24. MyUni's Dashboard displays content with a grid-view layout.

For our branch managers, the dashboard helps to facilitate effective engagement and management. Through features like “View Members”, “View Posted Events”, “Create Events”, and “Create Announcements”, managers can control their branch effectively by tracking member participation, coordinating event logistics, and posting announcements.

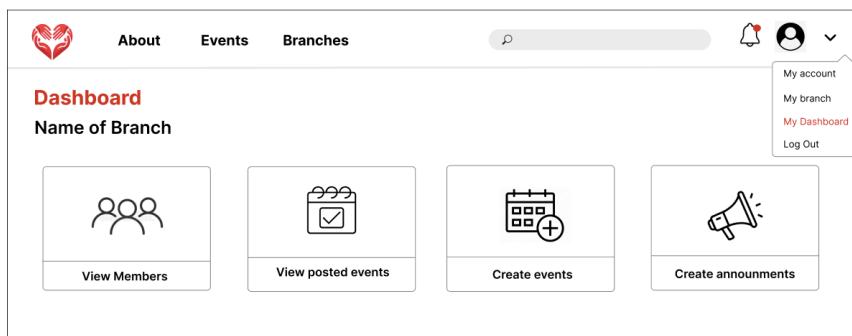

Figure 25. Organisation Manager's Dashboard

Meanwhile, the dashboard for system admins serves as a control centre that provides access to essential features such as “View Users”, “View Branches”, and “View Posted Events”. This helps our admins to efficiently manage user accounts, oversee different branch structures, and monitor events across the platform.

The screenshot shows a web-based dashboard interface. At the top, there is a navigation bar with icons for a heart, a magnifying glass, and a user profile, along with links for "About Us", "Events", and "Branches". Below the navigation bar, the word "Dashboard" is displayed in red. The main content area contains three large, rounded rectangular buttons arranged horizontally. The first button on the left has a icon of three people and the text "View Users" below it. The middle button has an icon of a gear with arrows pointing down to three smaller squares and the text "View Branches" below it. The third button on the right has an icon of a calendar with a checkmark and the text "View posted events" below it. At the bottom of the page, there is a black footer section containing contact information, quick links, and social media icons.

UX: PRINCIPLES OF USER INTERFACE DESIGN

Our design of the webpage lies a striking colour theme dominated by #E42313, also effectively signalling to users that they have arrived at a webpage dedicated to a humanitarian cause within the medical realm, which is the focus of our volunteer organisation.

How do users see the webpage?

First impression (the homepage):

The homepage contains the elements below:

Captivating large picture call to action: The top of the webpage features a background picture with the text "Care and Share" and a call to action button that says "Join us now" and a slogan.

2 grids (Our events and Our branches): The grids use clear visual images and titles, making it easier for users to navigate.

The central aim of the volunteer organisation's webpage is to attract an audience, and enticing them to become members. To achieve this, the main homepage is designed to avoid large blocks of text, employ concise paragraphs for key points, use stylistic elements to differentiate content, and incorporate visual elements wherever feasible. Through these deliberate measures, the main homepage offers visitors a comprehensive overview of the organisation's activities and opportunities for involvement.

How do users navigate through the website?

Likely Navigation: The webpage has a header at the top with links like "About," "Events," "Branches," and "Log In", while the footer has sections for "Location," "Quick Links," and "Connect with Us." This two-tiered navigation system offers multiple ways for users to find what they need.

Site identity and mission: Care and share is a volunteer organisation. This is clearly shown by the slogan "Share Moments, Care for Life"

Site hierarchy: The website is thoughtfully structured, allowing users to easily access information about the organisation's events and branches. Additionally, users can complete tasks like RSVPing for events. Once logged in, they can conveniently view all the events they've RSVPed for.

Search: This webpage also supports a search bar where users can search relevant events or branches.

Shortcuts: All the shortcuts can be found on the footer.

Registration: Placing the login/signup button at the top right of the webpage is a user-friendly choice, as it's a familiar location for users and enhances convenience.

The main homepage shows clear navigation and a user-friendly layout to help visitors understand the program's purpose and access information about events and branches.

Navigation control: Every link to another webpage is accompanied by breadcrumbs, providing users with a clear path to navigate their current location within the website.

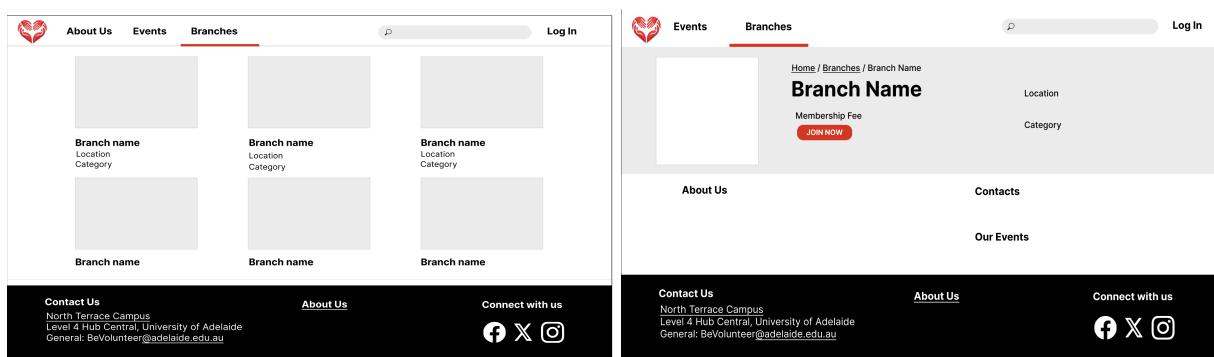

Figure 27. Breadcrumbs to indicate which page the user is on.

UX: COGNITIVE & KINEMATIC LOAD

We have improved the usability of user interfaces by minimising cognitive and kinematic load.

The **cognitive and kinematic load** of our website has been minimised through these practices:

Simplicity:

Our website adopts a clean and intuitive design, avoiding unnecessary clutter. Each web page focuses on specific tasks, such as exploring events or joining branches, without overwhelming users with extraneous information.

Choice of Words and Proximity:

Clear and action-oriented and jargon-free language are used throughout the site, as well as elements (e.g buttons) are strategically positioned to minimise user effort:

For Users, "Join Now"/"RSVP" buttons are prominently displayed under the branch/event name on the About Branch/About Event web pages, making it easy for users to express interest in joining a specific branch or event.

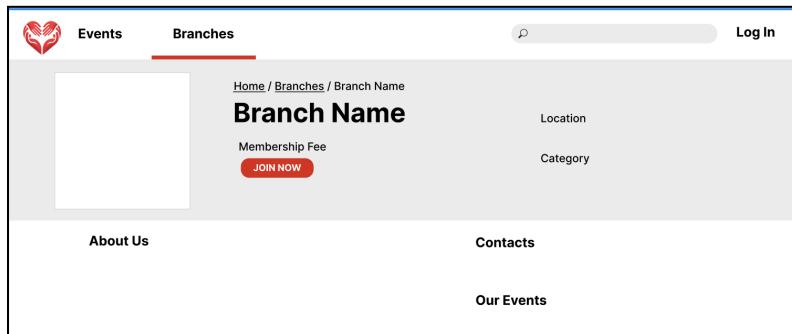

Figure 28. "Join Now" in About Branch page

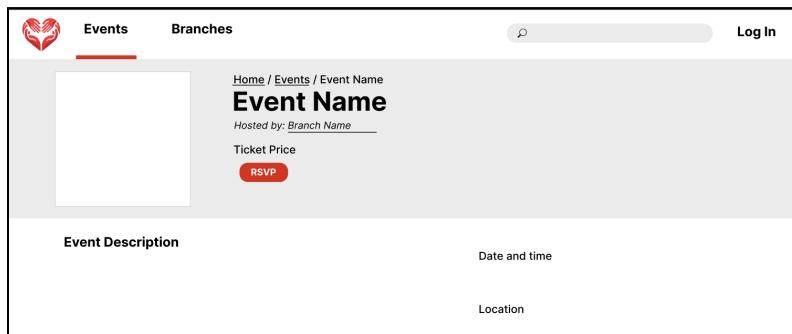

Figure 29. "RSVP" in About Event page

For managers, they can oversee the activities of their branches effectively through “My Dashboard”. My Dashboard also features concise and easy-to-understand languages such as “View Posted Events”, “View Members”, “Create Events”, and “Create Announcements”.

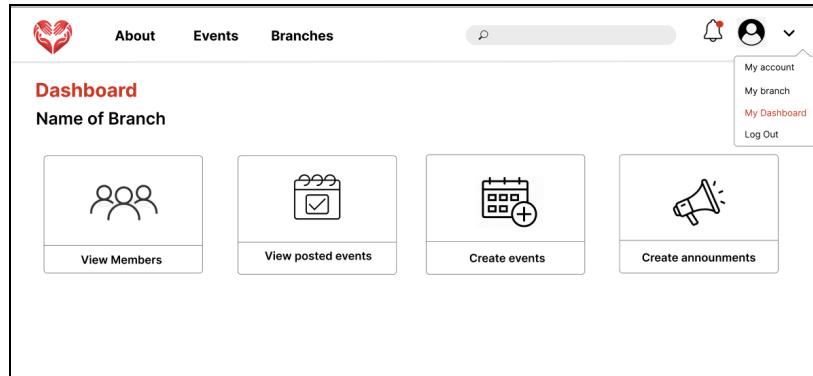

Figure 30. Action-oriented language in Dashboard page of managers

Layers

Essential controls are readily accessible without excessive navigation:

Branch managers and system admins can find commonly used actions readily available on their dashboards, avoiding digging through nested pages. This is inspired by MyUni dashboard:

A screenshot of the MyUni dashboard. At the top, there is a header with the title 'Dashboard' and a search bar labeled 'Search my courses'. Below the header is a grid of course cards. The first row contains three cards:
 - Card 1: 'Computer Science' (blue background) with 'Computer Science Careers and Ind...', 'AU COMP SCI 0002', '2020 Full Year', and three small icons (megaphone, document, gear).
 - Card 2: 'Computer Science School Announ...' (blue background) with 'AU COMP SCI 0001', '2023 Full Year', and three small icons.
 - Card 3: 'Data Handling and Visualisation II' (purple background) with '4410 APP DATA 2010', '2024 Semester 1', and three small icons.
 The second row contains three cards:
 - Card 1: 'Prob & Stats 2103 7103 (2024 S1...)' (brown background) with '4410 MATHS X 0006', '2024 Semester 1', and three small icons.
 - Card 2: 'Web & Database Computing (220...' (green background) with '4410 COMP SCI X 0017', '2024 Semester 1', and three small icons.
 - Card 3: 'Algorithm Design & Data Structur...' (brown background) with '4410 COMP SCI X 0004', '2024 Semester 1', and three small icons.

Figure 31. MyUni Dashboard

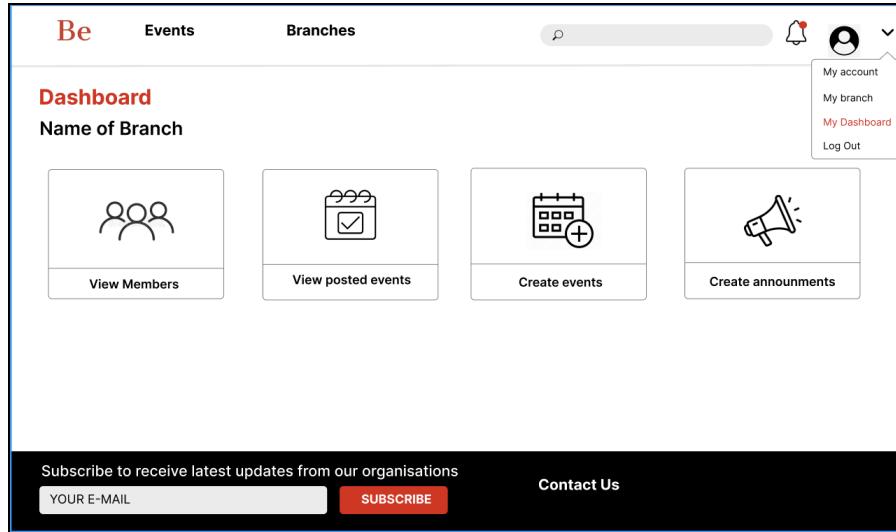

Figure 32. Managers Dashboard

Fitts's Law is also applied when designing clickable elements in order to optimise interaction:

"Join Now"/"RSVP" buttons are large and easily clickable, with ample space around them to minimise accidental clicks and facilitate rapid selection. The white text in the red background also makes the buttons more eye-catching.

Navigation links in the header including the logo, "About," "Events," and "Branches," are positioned close to the top of the page, making them effortless to access.

UX: SEMANTIC ELEMENTS

We improved our webpage's accessibility and structure by using semantic tags. In our HTML, tags such as `<header>` and `<footer>` are used in order to provide clear indications and purposes of different sections in our pages. One example is when implementing the header, semantic tags `<header>`, `<nav>` and `<form>` are used for accessibility benefits, specifically for those who rely on screen readers. Screen readers interpret semantic elements more accurately, providing better navigation and understanding of "Care & Share" website structure.

RESPONSIVENESS

To improve the responsiveness of our webpages and enhance the experience of users both on phones and desktop, we decided to set some dimensions to be fixed.

The header would occupy 12% viewport height, while the footer would occupy 25% viewport height. We utilise flexbox layout for efficient CSS management and include some dynamic value for all the pictures.

```
img {  
width: 100%;  
}
```

We also restrict the use of the exact pixel value but instead use other CSS dynamic units such as:

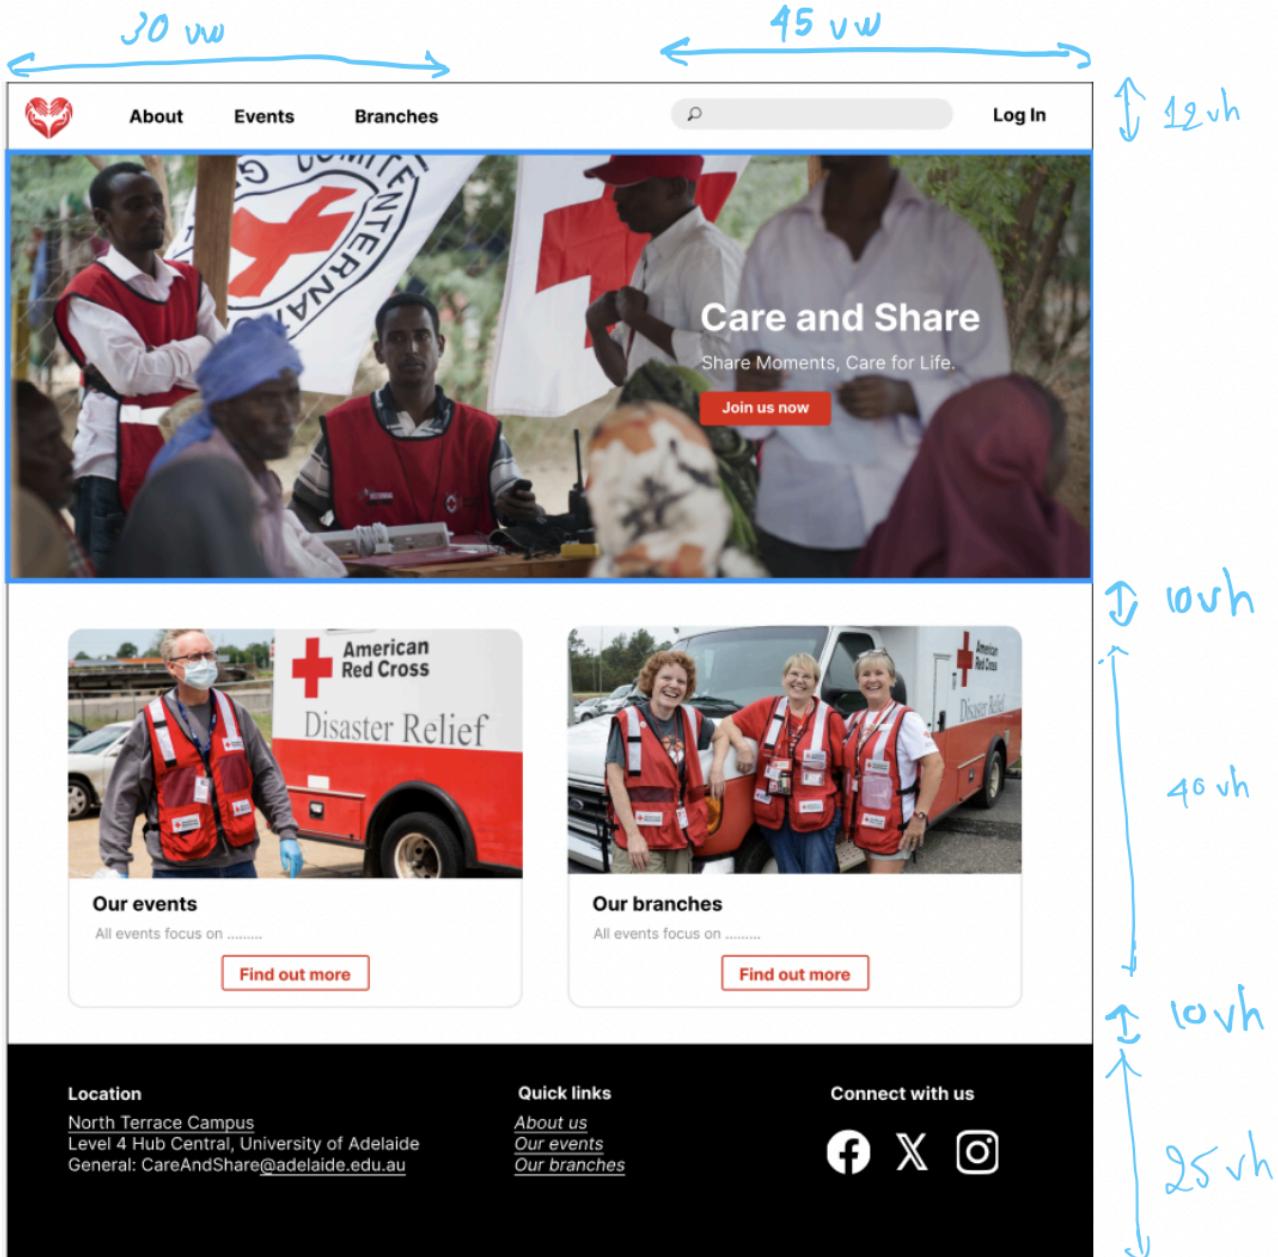

EM - relative unit based on the font-size of the element.

REM - relative unit based on the font-size of the element.

vh, vw - % of the viewport's height or width.

% - the percentage of the parent element.

Below is some of our webpage to better demonstrate all the ideas above.
